

Appendiks 1-4 for K. Olsen & Danish Rarities Committee 2025: The Danish List: A Checklist of the Birds of Denmark. – Dansk Orn. Foren. Tidsskr. 119: 105-112

This updated edition of The Danish List: A Checklist of the Birds of Denmark presents a comprehensive overview of the avifauna recorded in Denmark, including the entire Danish marine territory within the Exclusive Economic Zone. As of 2025, the list follows AviList (AviList Core Team 2025). Records of species and subspecies are categorized from A to F according to the guidelines of the Association of European Records and Rarities Committees. Species and subspecies in Categories A, B and C are admitted to the Danish List whereas species and subspecies in Categories D, E and F are not included. Where species and subspecies in Categories A, B or C are known to have also occurred as escapes, this is indicated in the systematic list by such species and subspecies also being included in Category E. Rare species and subspecies for which descriptions are required of records by the Danish Rarities Committee (DRC) to be considered for inclusion in Danish totals are marked with an “X”. Taxa for which descriptions of records have previously been required, the last year when records still needed to be submitted to the DRC is stated. A hyphen in front of or behind the year indicates that records of the taxon in question must be assessed by the DRC up to and including or from that year, respectively. Species for which descriptions of records must only be submitted to the DRC from certain regions of Denmark and its marine waters are marked with an “(X)” and the region is stated. The DRC also assesses records where a given individual can only be attributed to a group of closely related, rare species. These species groups are included in the systematic list but are not included in the species totals in Category A, B and C on the Danish List. Abbreviated codes are given for the frequency status, regularity, and faunistic categories of each species on the list as either a breeding or a migratory species. For polytypic species, where the subspecies have different faunistic status, the status is indicated for each subspecies. For breeding birds, status as migrant is also stated. For further details, please refer to the publication where the list is published in Dansk Ornitologisk Forenings Tidsskrift (DOFT), see below for reference.

APPENDIX 1: The Danish Bird List: Category A, B and C

Up to and including 1 September2025, the official Danish list includes a total of 505 species, which are divided into category A (491 species), B (6 species) and C (10 species). Of the 10 species in Category C, 8 taxa are unique to this category whereas one taxon (Ruddy Shelduck) in Category A is also in Category C, and one taxon (Eurasian Eagle-Owl) in Category B is also in Category C.
 Til og med 1. september 2025 omfatter den officielle danske liste i alt 505 arter, som er inddelt i kategori A (491 arter), B (6 arter) og C (10 arter). Ud af de 10 arter i kategori C er 8 arter unikke for denne kategori, hvorimod én art (Rustand) i kategori A også er i kategori C, og én art (Stor Hornugle) i kategori B også er i kategori C.

Species in Category D would otherwise appear in Category A, except that there is reasonable doubt that they have occurred in Denmark in a natural state. Species placed only in Category D form no part of the Danish List and are not included in the species totals. Category D is a holding category and is not intended to be a long-term assignment of any species. The species are reviewed periodically to assign them to either Category A or Category E. X indicates species for which descriptions are required of records by the Danish Rarities Committee to be considered for inclusion in Categories A-C of the Danish List. These species form no part of the Danish List.

Arter i kategori D ville ellers optræde i kategori A, bortset fra at der er rimelig tvivl om, at de er forekommet i Danmark i naturlig tilstand. Arter, der kun er placeret i kategori D, indgår ikke på den danske liste. Arterne i kategori D gennemgås med jævne mellemrum for at henføre dem til enten kategori A eller kategori E. X angiver arter, for hvilke Dansk Ornitologisk Forenings Sjældenhedsudvalg kræver indsendelse af beskrivelser af fund for at de kan komme i betragtning til optagelse i kategori A-C på den danske liste. Arter, der kun er placeret i kategori E, indgår ikke på den danske liste.

APPENDIX 3: Category E

A total of 198 species and subspecies have been placed in category E. Species and subspecies in Category E that have reproduced with success in the wild in Denmark are designated as E*. As this category includes all exotic bird species which escape or are released into the wild from captivity the list should be considered preliminary, and it may be impossible to get complete. When it comes to records of species in this category, only a limited part comes to public knowledge and even fewer are the records that are documented and published. To make the list of species in Category E as complete as possible known cases of additional species and subspecies documented in literature, or the daily press should be reported to the Danish Rarities Committee. X indicates species for which descriptions are required of records by the Danish Rarities Committee to be considered for inclusion in Categories A-C of the Danish List. Species placed only in Category E form no part of the Danish List and are not included in the species totals.

I alt 198 arter og underarter er placeret i kategori E. Arter og underarter i kategori E, der har ynglet med succes i naturen i Danmark, betegnes som E*. Da denne kategori omfatter alle eksotiske fuglearter, som undslipper eller slippes ud i naturen fra fangenskab, bør listen betragtes som foreløbig, og den kan være umulig at få fuldstændig. Når det drejer sig om registreringer af arter og underarter i denne kategori, kommer kun en begrænset del til offentlighedens kendskab, og endnu færre er de fund, der er dokumenteret og offentliggjort. For at gøre listen over arter og underarter i kategori E så fuldstændig som muligt bør kendte fund af arter og underarter dokumenteret i litteratur eller dagspressen indberettes til Dansk Ornitologisk Forenings Sjældenhedsudvalg. X angiver arter, for hvilke Dansk Ornitologisk Forenings Sjældenhedsudvalg kræver indsendelse af beskrivelser af fund for at de kan komme i betragtning til optagelse i kategori A-C på den danske liste. Arter, der kun er placeret i kategori E, indgår ikke på den danske liste.

		<i>Passerella iliaca</i>	Rævespurv	Fox Sparrow		
X	E	<i>P. i. ssp. indet.</i>			A	Subspecies undetermined, but likely to involve <i>ssp. altivagans</i>
X	E	<i>Xanthocephalus xanthocephalus</i>	Gulhovedet Trupial	Yellow-headed Blackbird	A	
	E	<i>Leistes superciliaris</i>	Hvidbrynet Stærling	White-browed Meadowlark	A	
		<i>Quiscalus quiscula</i>	Sortgrackel	Common Grackle		
X	E	<i>Q. q. ssp. indet.</i>			A	Subspecies undetermined
X	E	<i>Passerina cyanea</i>	Indigofinke	Indigo Bunting	A	
X	E	<i>Passerina amoena</i>	Lazulifinke	Lazuli Bunting	A	
		<i>Sicalis flaveola</i>	Safranfinke	Saffron Finch		
	E	<i>S. f. ssp. indet.</i>			VR	Subspecies undetermined
	E	<i>Paroaria coronata</i>	Grå Kardinal	Red-crested Cardinal	A	

APPENDIX 4: Category F

Included here are species and subspecies that were added to Category F as being recorded in Denmark before 1800 but not since (Løppenthin 1967). Species placed only in Category F form no part of the Danish List and are not included in the species totals. For explanations and backgrounds to these species, see Løppenthin (1967). Species in Category F that have reproduced with success in the wild in Denmark are designated as F*. X indicates species for which descriptions are required of records by the Danish Rarities Committee to be considered for inclusion in Categories A-C of the Danish List.

Arter og underarter, der er registreret i Danmark før 1800, men ikke siden (Løppenthin 1967). Arter placeret kun i kategori F er ikke en del af den danske liste. For forklaringer og baggrunde for disse arter, se Løppenthin (1967). Arter i kategori F, der har reproduceret sig med ynglet i naturen i Danmark, betegnes som F. X angiver arter, for hvilke Dansk Ornitologisk Forenings Sjældenhedsudvalg kræver indsendelse af beskrivelser af fund for at de kan komme i betragtning til optagelse i kategori A-C på den danske liste.*
